**Time taken** 14 mins 7 secs

**Grade** 80.00 out of 100.00

Question **1**

Not answered

Mark 0.00 out of 20.00

Write a Python function that prints out the first n rows of Pascal's triangle.

Note : Pascal's triangle is an arithmetic and geometric figure first imagined by Blaise Pascal.

**For example:**

| Input | Result                                     |
|-------|--------------------------------------------|
| 4     | [1]<br>[1, 1]<br>[1, 2, 1]<br>[1, 3, 3, 1] |

**Answer:** (penalty regime: 0 %)

1 ||

Question **2**

Correct

Mark 20.00 out of 20.00

Place **result="You can't divide with 0"** to the right place so that program avoids ZeroDivisionError.

For example:

| Input  | Result                  |
|--------|-------------------------|
| 5<br>0 | You can't divide with 0 |

Answer: (penalty regime: 0 %)

Reset answer

```
1 a=int(input())
2 b=int(input())
3 ▾ try:
4     result=a/b
5     print(result)
6
7 ▾ except ZeroDivisionError:
8     print("You can't divide with 0")
9
```

|   | Input  | Expected                | Got                     |   |
|---|--------|-------------------------|-------------------------|---|
| ✓ | 5<br>0 | You can't divide with 0 | You can't divide with 0 | ✓ |
| ✓ | 4<br>2 | 2.0                     | 2.0                     | ✓ |
| ✓ | 9<br>2 | 4.5                     | 4.5                     | ✓ |

Correct

Marks for this submission: 20.00/20.00.

Question **3**

Correct

Mark 20.00 out of 20.00

Write a function in Python that takes a list of integers as a parameter and returns a dictionary whose keys are the list integers and whose values are "even" or "odd" depending on the number parity.

`l = [24, 14, 3, 36, 41, 22, 15]`

**For example:**

**Result**

```
{24: 'Pair', 14: 'Pair', 3: 'Impair', 36: 'Pair', 41: 'Impair', 22: 'Pair', 15: 'Impair'}
```

**Answer:** (penalty regime: 0 %)

```
1 l = [24, 14, 3, 36, 41, 22, 15]
2 res={i:"Pair" if i%2==0 else "Impair" for i in l}
3 print(res)
```

|   | Expected                                                                                  | Got                                                                                       |   |
|---|-------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|---|
| ✓ | {24: 'Pair', 14: 'Pair', 3: 'Impair', 36: 'Pair', 41: 'Impair', 22: 'Pair', 15: 'Impair'} | {24: 'Pair', 14: 'Pair', 3: 'Impair', 36: 'Pair', 41: 'Impair', 22: 'Pair', 15: 'Impair'} | ✓ |

Passed all tests! ✓

**Correct**

Marks for this submission: 20.00/20.00.

## Question 4

Correct

Mark 20.00 out of 20.00

Write a Python class named Student with two attributes student\_id, student\_name, get the values from the user. Create a function to display the entire attribute and their values in Student class.

For example:

| Input                     | Result                                                                                                            |
|---------------------------|-------------------------------------------------------------------------------------------------------------------|
| V10<br>Jacqueline Barnett | Original attributes and their values of the Student class:<br>Student id: V10<br>Student Name: Jacqueline Barnett |

Answer: (penalty regime: 0 %)

```
1 class Student:
2     def __init__(self, studentid, studentname):
3         self.studentid=studentid
4         self.studentname=studentname
5     def details(self):
6         print(f'''Original attributes and their values of the Student class:
7 Student id: {self.studentid}
8 Student Name: {self.studentname}''')
9
10 studentid=input()
11 studentname=input()
12 obj=Student(studentid, studentname)
13 obj.details()
```

|   | Input                        | Expected                                                                                                             | Got                                                                                                                  |   |
|---|------------------------------|----------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|---|
| ✓ | V10<br>Jacqueline<br>Barnett | Original attributes and their values of the<br>Student class:<br>Student id: V10<br>Student Name: Jacqueline Barnett | Original attributes and their values of the<br>Student class:<br>Student id: V10<br>Student Name: Jacqueline Barnett | ✓ |
| ✓ | M19<br>Joey Tribbiani        | Original attributes and their values of the<br>Student class:<br>Student id: M19<br>Student Name: Joey Tribbiani     | Original attributes and their values of the<br>Student class:<br>Student id: M19<br>Student Name: Joey Tribbiani     | ✓ |

Passed all tests! ✓

Correct

Marks for this submission: 20.00/20.00.

## Question 5

Correct

Mark 20.00 out of 20.00

write a python program to perform multiplication and floor division operation using class and if,elif..note:

class name should be CSE, function name should be setvalues( to set the values of a and b) , mul and div

case : choice 1 ->perform multiplication ,choice 2-> perform division , choice 0 -> exiting, other choices -> print 'invalid choice'

For example:

| Input | Result     |
|-------|------------|
| 5     | Result: 25 |
| 5     | Exiting!   |
| 1     |            |
| 0     |            |

Answer: (penalty regime: 0 %)

```

1 class cse:
2     def setvalues(a,b,mul,div):
3         ch=int(input())
4         if ch==1:
5             print("Result: ",mul)
6         elif ch==2:
7             print("Result: ",div)
8         if ch!=0 and ch!=1 and ch!=2:
9             print("Invalid choice")
10        else:
11            print("Exiting!")
12
13 a=int(input())
14 b=int(input())
15 mul=a*b
16 div=round(a/b)
17 cse.setvalues(a,b,mul,div)

```

|   | Input | Expected   | Got        |   |
|---|-------|------------|------------|---|
| ✓ | 5     | Result: 25 | Result: 25 | ✓ |
|   | 5     | Exiting!   | Exiting!   |   |
|   | 1     |            |            |   |
|   | 0     |            |            |   |
| ✓ | 5     | Result: 1  | Result: 1  | ✓ |
|   | 5     | Exiting!   | Exiting!   |   |
|   | 2     |            |            |   |
|   | 0     |            |            |   |

Passed all tests! ✓

Correct

Marks for this submission: 20.00/20.00.
